

## InnoAquaTech Newsletter Winter 2018

Dear readers,

an exciting and eventful year is coming to an end. In the InnoAquaTech project, a second shrimp cultivation trial in Poland has just started, and also in Lithuania shrimps are beginning to grow in a facility in Klaipeda. A second study visit was organized, bringing together stakeholders and aquaculture enthusiasts to visit innovative RAS and aquaponics facilities in Belgium. But also in other areas of aquaculture a lot is happening.

### News from InnoAquaTech

#### Moving towards sustainable crustacean farming: a Polish summer school on white-leg shrimp

We have become frequent consumers of aquaculture products, but we know little about where they come from and under what conditions they are farmed, especially crustaceans like shrimp. To raise awareness and to promote the South Baltic aquaculture industry, the Institute of Oceanography, University of Gdańsk, organized a 3-day summer school for interested stakeholders ([more](#)).

#### InnoAquaTech Study Visit to Belgium – a breath of fresh air for European aquaculture

The almost 20 participants from the Southern Baltic region were able to form their own impression of the innovative approaches of Flemish aquaculture and got to know species that are rarely found in Europe. In particular, the focus was on sustainability and was characterised by interesting concepts for the use of waste heat. ([more](#)).
