Introducing DMRI Yield Manager & Yield Inspector

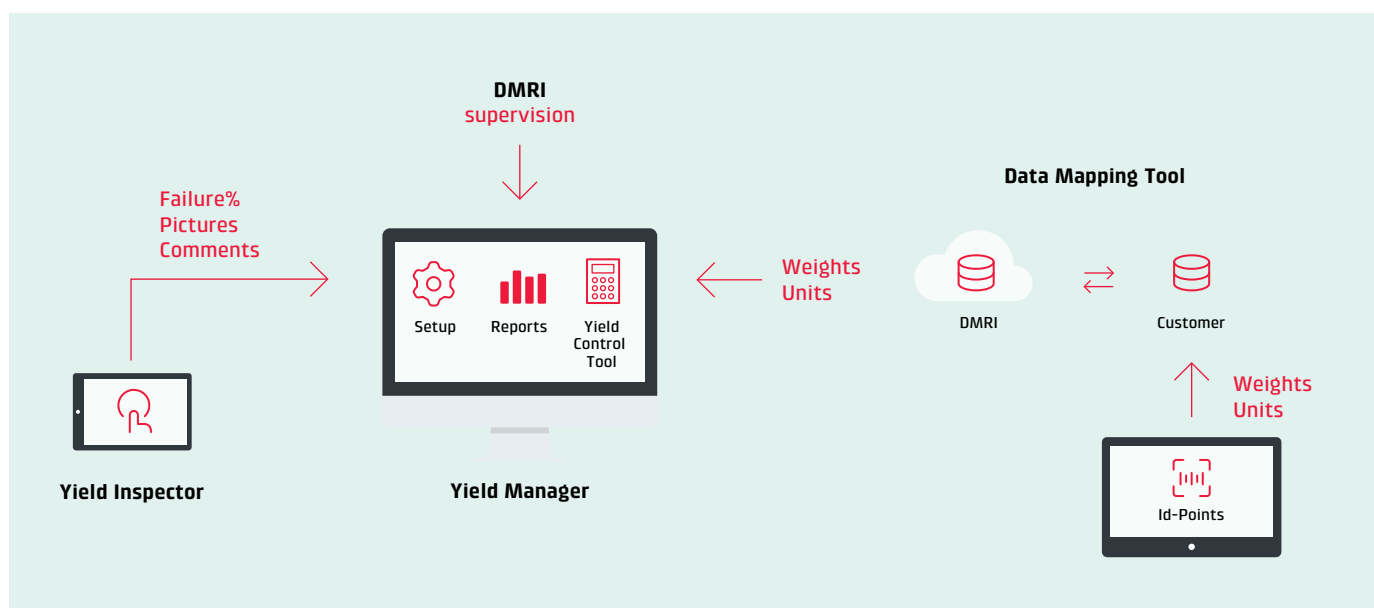

Powerfull tools for Meat Industry Excellence

In the meat industry, maximising yields and profits while maintaining high-quality products is a top priority. The manual labour involved in the slaughtering, cutting, and deboning process remains crucial to the economic success of the industry. However, despite the hard work of employees, cutting errors can still occur, resulting in decreased yields and profitability.

This is where the Yield Manager & Yield Inspector come in – our specialised software tools designed to enhance the meat industry. Our tools provide a systematic approach to monitoring and improving the production process, ensuring consistent yields and high-quality products.

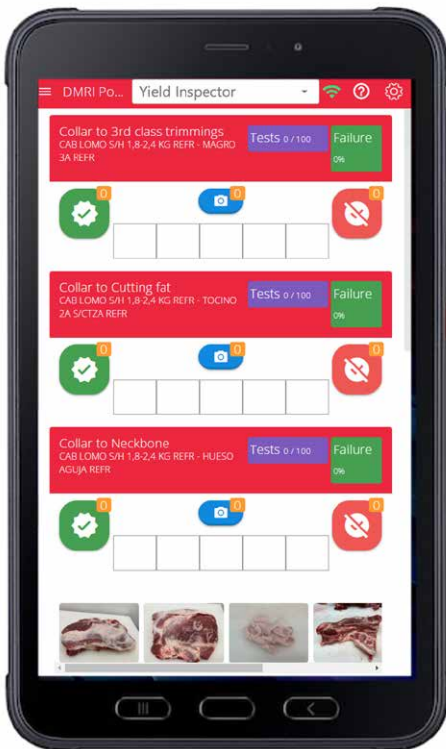

Our experience shows that managers in the meat industry often lack the knowledge to fully utilise their product specifications and maximise profits for each product. Yield Manager & Yield Inspector provide an effective solution to this challenge. The system is based on two fundamental pillars:

- The implementation of a systematic procedure for continuously monitoring the deviations from the specifications on the production lines, with immediate adoption of corrective actions when deviations from the specifications are detected.
- The adoption of a continuous improvement system based on yield and economic outcome indicators, derived from the actual production in the cutting and deboning room and reference sales prices.

Unlocking Optimal Yields with Yield Manager & Yield Inspector

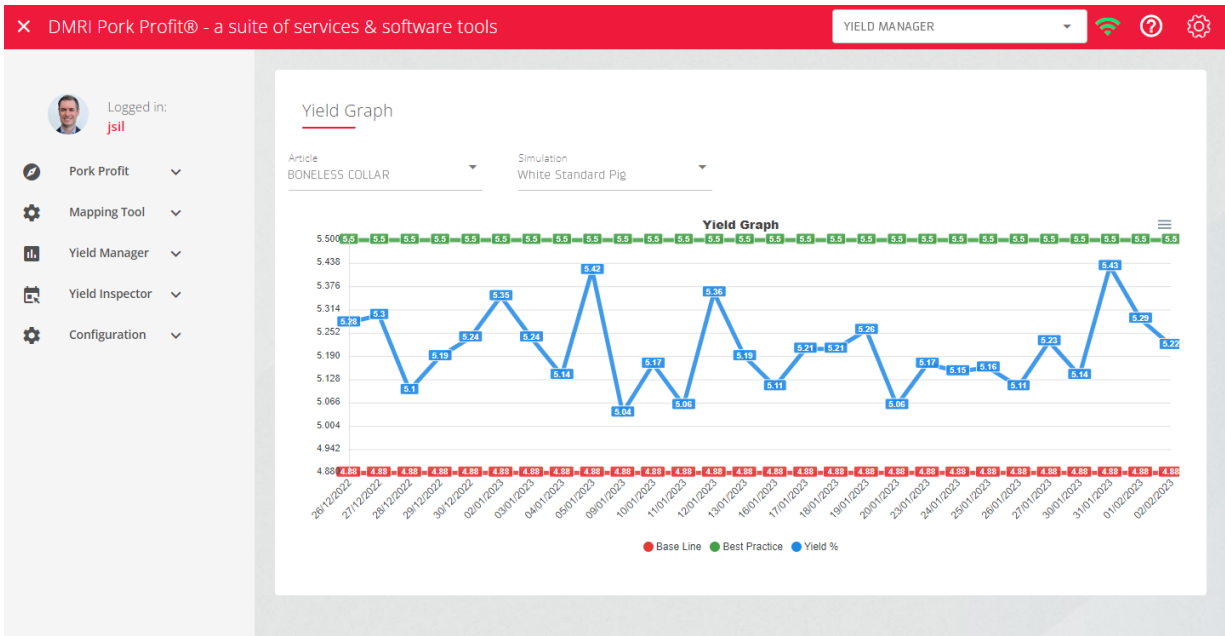

A Comprehensive Software Solution

Yield Manager & Yield Inspector are cloud-based specialised software tools that seamlessly integrate with any ERP designed to streamline the meat industry production process

YIELD INSPECTOR is an app that is used by key supervisors who are trained by DMRI. It allows them to assess control points on the production lines to ensure that the most valuable products are being maximised within product specifications. The supervisors enter their assessments and take pictures of the products, which are uploaded to DMRI's database.

YIELD MANAGER integrates all the information gathered by Yield Inspector and provides a comprehensive view of the production process through reports, tables, and graphs. It includes a Data Mapping Tool that gathers production information from the company's database and transfers it to DMRI's database. With Yield Manager, companies can monitor their yields and continuously improve them, while DMRI provides expert advice and support. The software calculates yields, compares them to the Baseline and Best Utilization of the specifications, and calculates the economic improvement achieved, giving companies all the information they need to make qualified decisions and improve their profits.

We have the Knowledge – the Choice is Yours

With Yield Manager & Yield Inspector, you will be able to

- Continuously monitor deviations from the product specifications on the production lines and implement immediate corrective actions.
- Adopt a continuous improvement system based on yield and economic outcome indicators derived from the actual production in the cutting and deboning room and reference sales prices.
- Limit costly deviations from specifications and maintain a consistent focus and make immediate corrective actions on product quality and standards.

Our tools are based on a thoroughly tested concept for increasing yields in the slaughtering, cutting, and deboning process. This concept has been implemented successfully in numerous meat companies, showing positive results within just a few weeks, including an increase in profit of +0.02 to +0.05 EUR per carcass kg.

At DMRI, we believe that our software tools, Yield Manager & Yield Inspector, can bring significant value to your meat company. Our commitment to our clients is to provide effective solutions that help drive their success.

Don't miss out on this opportunity to take your meat company to the next level. Contact us today to learn more about Yield Manager & Yield Inspector and how they can help you improve your yields and profits.
