The cash flow statement cannot be directly derived from the other parts of the consolidated accounts. The changes stated in working capital do not equate to the difference between opening and closing balances for the corresponding items in the balance sheet. This is due to the stated amount in the cash flow statement solely representing movements that affect liquidity. The difference between the opening and closing balance for items in the balance sheet is due to movements that affect and do not affect liquidity. One example of a movement with no effect on liquidity is provisions.

Movements with no effect on liquidity are placed under "Adjustment for non-cash items" in the cash flow statement.
