Pilot plant - unique opportunities

Pilot Plant: from ingredient to finished product

The pilot plant at Danish Technological Institute is a food manufacturing facility authorised for export and monitored by Danish food safety authorities.

We support the entire development chain from processing raw materials into ingredients and/or food products, offering industry-close facilities for upscaling, customer sample preparation, and production hygiene trials.

Supported by integrated on-site chemical and microbiological laboratories, our skilled technicians and expert consultants leverage over 70 years of research to deliver high level technical solutions and project management. Contact us to arrange a personal visit to our facilities.

- **Authorized for export - produce samples for your customers**
- **Authorized to handle byproducts (Cat. 2)**
- **Authorized to conduct challenge tests with pathogens under strict monitoring**
